

HGL

REMOTE MOUNTED SHIFT CUT GEAR LEVERS

- Gear Lever system designed to work with sequential gearboxes that do not have an integral gear lever.
- The lever is manufactured from high strength 6061 Aluminium, mounted to either a steel or aluminium base plate.
- Shifting is via a high strength cable or rod that connects to the transmission, allowing a large range of freedom with the mounting position.
- 2 basic designs are available, one with a mid-pivot point (MP) and one with an end-pivot point (EP).
- A neutral lock-out lever is integrated with the body to interface with the standard Holinger neutral lock-out system.
- Available with an HGK-S, ignition-cut gear knob.
- The weight is 1-1.2kg for the gear lever/base plate, and ~0.7kg for the shift cable (depending on the length).
